

Welcome!

Thank you for visiting our website! Be our guest. Our subject is anything to do with **Energy!**

No, we do not supply cheap energy; much better, we offer...

**highly energy efficient constructions (all kinds of buildings);
and highly energy efficient heating/cooling systems etc.**

Both topics help with saving money, avoiding emissions and offer the option to live in an healthy environment. Why this is all inter-connected we are able to demonstrate and prove to you, here on our website and in reality.

Energy needs to be generated and distributed - and managed at all times.

Not needing, i.e. using, energy is the most efficient way of avoiding emissions and cost.

So it boils down to efficiency. The higher - the better!

So please feel invited to read more about our [advanced constructions](#) and our [advanced energy](#) - heating and cooling - systems.

We hope you will find our offer interesting and inspiring; most certainly you will want to know more about certain issues or discuss specific solutions; so please feel free to contact us anytime for further details.

Please enjoy. Thank you.

C.A.Wittke

Inverness, December 2007

P.S.: I am personally concerned about the ongoing discussion in reference to global warming and what should or should not be done; some general information you will find under [finite globe](#), but we also add what we feel is of high importance to the news section on the left of each of our pages. For more background we have a long list of relevant [links](#). We also installed a [forum](#) because we think it will be very important to discuss the urgent topics not just by consuming streamlined news. Topics that will govern our life for many years to come, topics that will be unpleasant to be discussed with our children because they will ask us "How could you...?" or "Why didn't you...?". And topics, that we all will soon be - or are already - fed up with.

However, to become fed up with discussions directly related to our very existence will not feed us, warm us or carry us; it threatens our survival - and that of our children.
